Detail Action

Page 2

1. This Office Action is in response to the Application SN 09/891,020 filed on

06/25/2001. Claims 1-18 are presented for examination.

Information Disclosure Statement

2. The information disclosure statement filed 06/25/2001 fails to comply with 37

CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each

publication or that portion which caused it to be listed; and all other information or that

portion which caused it to be listed. It has been placed in the application file, but the

information referred to therein has not been considered.

Specification

3. The disclosure is objected to because of the following informalities:

a. On page 15, line 18: "... packet "3"." should be "... packet "2"."

Appropriate correction is required.

Application/Control Number: 09/891,020 Page 3

Art Unit: 2141

Claim Objections

- 4. Claims 12-13 are objected to because of the following informalities:
 - Claims 12-13 are identical to claim 11.
- b. Claim 3, line 2: "creating a plurality of logical page ..." should be "creating a plurality of logical pages ..."

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nijhawan et al. (US 6,374,341), herein after referred as Nijhawan, in view of Vishin et al. (US 5,860,146), herein after referred as Vishin.

7. As to claim 1, Nijhawan teaches a method comprising:

moving data from a mass storage device into a physical memory page, said physical memory page comprising a plurality of physical memory clusters (a plurality of memory blocks 92 and 94 as in Fig. 9);

creating a logical page providing an aligned view of the data (Nijhawan, C3:L60 – C4:L27);

establishing a relationship between the logical page and the physical memory page such that the logical page is associated with said plurality of physical memory clusters (a logical page number is mapped or translated to a physical page number, and then the target physical location within the page can be accessed) (Nijhawan, C4: L3-6);

forwarding a list of the logical pages (i.e., a page table) to a storage resource such that the data referenced by the logical pages are stored subsequently into a storage resource (as in Fig. 8, the linear address translation maintains all memory blocks are aligned, no two such memory blocks are mapped in the same linear address, no overlapping mappings and the block of memory is correctly sized-aligned in physical memory as in Fig. 9) (Nijhawan, C9: L26-37 and C10: L7-16).

However, Nijhawan does not explicitly teach moving data from a network layer into a physical memory page.

In a related art, Vishin teaches a distributed computer system having a primary translation lookaside buffer for storing page table entries and translating virtual (logical) addresses into physical addresses governed by a memory controller 112 that can also send requests via a network 114 to pull in pages of data stored in the memory stores or

secondary memory of other clusters 102 or other devices coupled to the network 114 (Vishin, Fig. 1, C1: L12-24).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the teachings of Nijhawan and Vishin to include moving data from a network layer into a physical memory page since such methods were conventionally employed in the art to extend the address space to memory outside the cluster by using virtual memory management subsystem to manage access to remote physical address through the use of a page table and/or an auxiliary translation lookaside buffer (Vishin, C1: L5-9 and L54-63).

- 8. As to claim 2, Nijhawan-Vishin teaches the method of claim 1, further comprising: dividing the physical memory pages into physical memory clusters (memory block size from 4K to 4M) such that the data received by the network layer is stored into the physical memory clusters (i.e., data is stored in memory blocks 92 and 94) (Nijhawan, Fig. 9 and C10: L7-16).
- 9. As to claim 3, Nijhawan-Vishin teaches the method of claim 1, further comprising: creating a plurality of logical pages based on the offset and length of the data associated with a network drive operation (Nijhawan, C7: L3-18 and C8: L40-51).
- 10. As to claim 4, Nijhawan-Vishin teaches the method of claim 1, further comprising: creating a read only logical page comprising zeros, i.e., comprising un-initialized data

Art Unit: 2141

(the OS ensures that all memory blocks are aligned on a 4M linear address boundary so that the lower 22 bits of the starting linear address of the memory blocks are zero) (Nijhawan, C2: L1-5).

- 11. As to claim 5, Nijhawan-Vishin teaches the method of claim 1, further comprising: merging an existing physical memory cluster with a new physical cluster based on the offset and length of the existing physical memory cluster and based on the offset and length of the new physical memory cluster (within the allocated 128K of memory, the OS inherently maps 64K block of memory that resides in physical memory on 64K boundaries, which can be used for the desired 40K block, and then the extra memory on either side of the 64K boundaries can be reallocated/remerged) (Nijhawan, C9:L61 C10:L7).
- 12. Claims 6-13 are corresponding system claims of method claims 1-5; therefore, they are rejected under the same rationale.
- 13. Claims 14-18 are corresponding computer-readable medium claims of method claims 1-5; therefore, they are rejected under the same rationale.
- 14. Further references of interest are cited on Form PTO-892, which is an attachment to this office action.

15. A shortened statutory period for reply to this action is set to expire THREE (3)

months from the mailing date of this communication. See 37 CFR 1.134.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Quang N. Nguyen whose telephone number is (571)

272-3886.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

SPE, Rupal Dharia, can be reached at (571) 272-3880. The fax phone number for the

organization is (703) 872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
